

# *If it can be stolen you can track it.*

## **STOP THEM IN THEIR TRACKS!!**

Using our miniature GPS/GSM/GPRS technology, we are now able to guide officers to stolen "bait" items with pin point accuracy.

In addition to street level mapping with seven digit post code information, the tracked stolen objects can be automatically pin pointed on Google Maps to within 10 metres.

An in- built RF location aid, together with audio listening and a siren alert option provides the ability to locate the stolen item within buildings or vehicles.

Even if the internal battery goes flat after extended deployment, once the item sees a power source in the hands of the thief it will report in it's position.

***Our TECHNOLOGY turning your OBJECTIVES into reality.***
